## How to Read Numbers

|  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hundreds | Tens | Ones | Hundreds | Tens | Ones | Hundreds | Tens | Ones |
| Thousand |  |  |  |  |  |  |  |  |

Reading numbers is as easy as $1,2,3 \ldots$

Step 1: Write the number in the chart above. Let's use the number above as an example. (Notice how the number is written in 3-digit "chunks".)

Step 2: Start at the left side of the number, and read the 3-digit number, then say its "family". In our example, the 3-digit number is just " 3 " and its family is "million".

Step 3: Repeat the second step until you've read the 3-digit number in the "one" family.

Put it all together: "3 million, 572 thousand, 13 (you don't say the "one" family)
